Foreword

The year 1972 marks the 100th anniversary of H.M.S. CHALLENGER—after which D/V GLOMAR CHALLENGER is named. It is fitting that our century should have its counterpart to the famous ship of the 19th century, which helped establish oceanography as a science through her voyages. It is equally fitting that GLOMAR CHALLENGER should be plying the same waters one century later seeking answers to new problems concerning the history of our planet and of life on it. The fundamental advancement of our knowledge of the earth will lead to enhanced capabilities to understand its processes and to exploit its natural resources intelligently.

The Deep Sea Drilling Project is being undertaken within the context of the National Science Foundation's Ocean Sediment Coring Program. The Foundation is funding the project by means of a contract with the University of California, and the Scripps Institution of Oceanography is responsible for its management. The University has, in turn, subcontracted with Global Marine Incorporated for the services of the drilling ship, GLOMAR CHALLENGER. Scientific planning, both of the detailed itinerary and of the preliminary analyses leading to these Initial Reports, has been conducted under the auspices of the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES). The JOIDES consortium has convened several panels for that purpose, consisting of a large number of distinguished scientists from academic institutions, government agencies, and private industry. Altogether, the project has involved the active interest and participation of many of the Nation's best scientists and technologists. Leading scientists from abroad have participated and their countries have made contributions to the project.

The first ocean coring operations for the Deep Sea Drilling Project began on August 11, 1968. During the ensuing 18 months of drilling operations in the Atlantic and Pacific Oceans, the Gulf of Mexico, and the Caribbean Sea, the scientific objectives that had been set forth were successfully accomplished. Primarily, the age of the ocean basins and their processes of

development were determined. Emphasis was placed on broad reconnaissance and on testing the involvement of the mid-oceanic rise systems in the development of the ocean basins.

As a result of the success of the Deep Sea Drilling Project, the National Science Foundation extended its contract with the University of California to encompass an additional 30 months of drilling, allowing GLOMAR CHALLENGER to continue operations throughout the oceans of the world in exploring the deep ocean floors. This extension includes a broad geographic range of operations in the Atlantic, Pacific, and Indian Oceans, and the Mediterranean, Caribbean, Bering, and Red Seas. The ultimate goal is a fundamental advancement of our knowledge of the earth.

These reports contain the results of initial studies of the recovered core material and the associated geophysical information. The contribution to knowledge has been exceedingly large and future studies of the core material over many years will contribute much more. The National Science Board in its 1971 report, "Environmental Science—Challenge for the Seventies," stressed the importance of the work of the GLOMAR CHALLENGER:

Special mention should be made of the development of new types of deep sea drilling techniques and their use on the unique, prototype vessel, GLOMAR CHALLENGER. This facility has brought to light in only a few years information that has literally revolutionized man's understanding of the physical processes occurring in the earth's crust.

Moreover, industry should benefit greatly from the project—from the technological advances that are being made and through the information being obtained on natural resources.

H. Guyford Stever

Washington, D. C.
June 1972

Preface

Recognizing the need in the oceanographic community for scientific planning of a program to obtain deep sedimentary cores from the ocean bottoms, four of the major oceanographic institutions that had strong interests and programs in the fields of marine geology and geophysics, formed in May 1964, the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES). This group, Lamont-Doherty Geological Observatory; Rosenstiel School of Marine and Atmospheric Science, University of Miami; the Scripps Institution of Oceanography, University of California at San Diego; and the Woods Hole Oceanographic Institution, expressed an interest in undertaking scientific planning and guidance of the sedimentary drilling program. It was the purpose of this group to foster programs to investigate the sediments and rocks beneath the deep oceans by drilling and coring. The membership of this original group was later enlarged in 1968 when the University of Washington became a member.

Through discussions sponsored by the JOIDES organization, with support from the National Science Foundation the Lamont-Doherty Geological Observatory operated a drilling program with Dr. J. Lamar Worzel as Principal Investigator. This successful drilling effort early in the summer of 1965, on the Blake Plateau region off Jacksonville, Florida, used the drilling vessel, *Caldwell I*.

With this success in hand, planning began for a more extensive deep sea effort. This resulted in the award of a contract by the National Science Foundation to the University of California for an eighteen-month drilling program in the Atlantic and Pacific Oceans, termed the Deep Sea Drilling Project. Operations at sea began in August 1968.

The goal of the Deep Sea Drilling Project is to gather scientific information that will help determine the age and processes of development of the ocean basins. The primary strategy is to drill deep holes into the ocean floor, relying largely on technology developed by the petroleum industry.

Through the efforts of these five principal organizations and of the panel members which were drawn from a large cross section of leading earth scientists and associates, a scientific program was developed.

Cores recovered from deep beneath the ocean floor will provide reference material for a multitude of future studies in fields such as biostratigraphy, physical stratigraphy, and paleomagnetism, that will afford a new scope for studies of the physical and chemical aspects of sediment provenance, transportation, deposition, and diagenesis. In-hole measurements, as feasible, should provide petrophysical data to permit inference of lithology of intervals from which no cores were recovered.

A report, describing the core materials and information obtained both at sea and in laboratories on shore, is published as soon as possible after the completion of each cruise. These reports are a cooperative effort of the scientists participating in the cruise and are intended primarily to be a compilation of results which, it is hoped, will be the starting point for many future new and exciting research programs. Preliminary interpretations of the data and observations taken at sea, are also included.

Core materials and data collected on the cruise will be made available to qualified scientists through the Curator of the Deep Sea Drilling Project, following a Sample Distribution

Policy (p. xvii) approved by the National Science Foundation.

The advent of *Glomar Challenger*, with its deep-water drilling ability, is exceedingly timely. It has come when geophysical investigation of the oceans has matured through 20 to 30 years of vigorous growth to the point where we have some knowledge about much of the formerly unknown oceanic areas of our planet. About one million miles of traverses had been made which tell us much about the global pattern of gravity, magnetic and thermal anomalies, and about the composition, thickness and stratification of the sedimentary cover of the deep-sea and continental margin. The coverage with such data has enabled the site selection panels to pick choice locations for drilling. The knowledge gained from each hole can be extended into the surrounding area. Detailed geophysical surveys were made for most of the selected locations prior to drilling.

The earth sciences have recently matured from an empirical status to one in which substantial theories and hypotheses about major tectonic processes are flourishing. Theories about the origin of magnetic fields and magnetic reversals, about ocean floor spreading and continental drift, and about the thermal history of our planet, have led to specific predictions that could be tested best by an enlightened program of sampling of deep-sea and continental margin sediments and underlying rocks.

The members of JOIDES and the scientists from all interested organizations who have served on the various advisory panels are proud to have been of service to the Nation and believe that the information and core materials that have been obtained will be of value to students of earth sciences and all humanity for many years to come.

Deep Sea Drilling Project

SAMPLE DISTRIBUTION POLICY*

Distribution of Deep Sea Drilling samples will be undertaken in order to (1) provide supplementary data for inclusion in the appropriate Initial Report to support *Glomar Challenger* scientists in achieving the scientific objectives of their particular cruise, and (2) provide individual investigators with material to conduct detailed studies beyond the scope of the Initial Reports.

The National Science Foundation has established a Sample Distribution Panel to advise on distribution of core material. This panel is chosen in accordance with usual Foundation practices, in a manner that will assure advice in the various disciplines leading to a complete and adequate study of the core and related materials. Funding for the proposed research is handled separately by the investigator, not through the Deep Sea Drilling Project.

Distribution of samples for contributions to Initial Reports

Any investigator who wishes to contribute a paper to a given volume of the Initial Reports may write to the Curator, Deep Sea Drilling Project, Scripps Institution of Oceanography, University of California, at San Diego, La Jolla, California 92037, requesting samples from a forthcoming cruise. The request should include the nature of the study, and type, size, number of samples, particular sampling techniques or equipment that might be required, and an estimate of the time required to complete the study. The requests will be reviewed by shipboard scientists, and, if they are deemed suitable and pertinent to the objectives of the leg, and shipboard workload permits, the requested samples will be taken during the cruise (provided, of course, material suitable to the investigation is obtained during the drilling). In case of multiple requests to perform the same investigation, selection of investigator will be made by the shipboard scientific party. Proposals should be of a scope appropriate to complete the sampling and study in time for publication in the Initial Reports. Studies deemed acceptable will be referred to the Curator who will, with the consent of the NSF Sample Distribution Panel, authorize distribution of the samples. The Sample Distribution Panel and the Deep Sea Drilling Project will strive to ensure that there is a reasonable degree of continuity in the investigations among the various cruises, that the studies are pertinent to goals of the cruise, and that they are consistent with the publication policy for the Initial Reports. Subject to these same provisions, the ship-

board scientific party may elect to have special studies of selected core samples of its recently completed cruise made by other investigators.

Investigations not completed in time for inclusion in the Initial Report may not be published in other journals until publication of the Initial Report for which it was intended, though it is expected that they will normally be published as an appendix in a later Initial Report volume.

Distribution of Samples for publication other than in Initial Reports

1. Researchers intending to request samples for studies beyond the scope of the Initial Reports should first obtain a sample request form from the Curator, Deep Sea Drilling Project, Scripps Institution of Oceanography, University of California at San Diego, La Jolla, California 92037. Requests should specify the quantities and intervals of the core required, a statement of the proposed research, the possibility of returning residue to the Curator, the estimated time required to complete and publish the results, and the availability or need of funding and availability of equipment and space foreseen for the research.

In order to ensure that requests for highly desirable but limited samples can all be considered, approval of requests and distribution of samples will not be made prior to 12 months after date of completion of the cruise that collected the cores. Prior to the publication of an Initial Report, requests for samples from a cruise can be based on the preliminary shipboard core logs. Copies of these logs will be kept on open file at Scripps Institution of Oceanography and other designated institutions. The only exceptions to this policy will be for specific instances involving ephemeral properties.

Requests for samples from researchers in industrial laboratories will be handled in the same manner as those from academic organizations, and there will be the same obligation to publish results promptly. Requests from foreign scientists or organizations will also be considered.

2. The Deep Sea Drilling Project's Curator has the responsibility for distributing samples, controlling quality of samples, and preserving core material. He also has the responsibility for maintaining a record of requests for samples that have been

*Revised June 1972.

processed and filled indicating the investigator and subjects to be studied. This record will be available to investigators.

The distribution of samples will be made directly from the two repositories at Lamont-Doherty Geological Observatory and Scripps Institution of Oceanography by the Curator or his designated representative.

3. (a) Samples up to 10 cc/meter of core length can be automatically distributed by the Curator, Deep Sea Drilling Project, or his authorized representative to any qualified investigator who requests them. The Curator will refrain from making automatic distribution of any parts of the cores which appear to be in particularly high demand, and any requests for these parts of the cores will be referred to the Sample Distribution Panel for review. Requests for samples from thin layers or important stratigraphic boundaries will generally require Panel review.

(b) All requests for samples in excess of 3(a) above will be referred to the Sample Distribution Panel.

(c) If, in the opinion of scientific investigators, certain properties they wish to study may deteriorate prior to the normal availability of the samples, such investigators may request that the normal waiting period not apply. All such requests must be approved by the Sample Distribution Panel.

4. Samples will not be provided prior to assurance that funding for sample studies either exists or is not needed. However, neither formal approval of sample requests nor distribution of samples will be made until the appropriate time (Item 1). If a sample request is dependent, either wholly or in part, on proposed funding, the Curator will provide to the organization to whom the funding proposal has been submitted any information on the availability (or potential availability) of samples that it may request.
5. Investigators receiving samples are responsible for:
 - i) promptly publishing significant results;
 - ii) acknowledging, in publications, that samples were supplied through the assistance of the National Science Foundation;
 - iii) submitting four (4) copies of all reprints of published results to the Curator, Deep Sea Drilling Project, Scripps Institution of Oceanography, University of California at San Diego, La Jolla, California 92037;

iv) notifying the Curator of any work done on the samples that is additional to that stated in the original request for samples;

v) returning, in good condition, the remainders of samples after termination of research, if requested by the Curator.

6. Cores will be made available at repositories for investigators to examine and specify exact samples in such instances as this may be necessary for the scientific purposes of the sampling, subject to the limitations of 3 (a), (b), (c), and 5, above, and with the specific permission of the Curator or his delegate.
7. Cores of igneous and metamorphic rocks will also remain at the repositories where they will be available for observation and description and where selected samples may be taken for thin-section preparation and other work.
8. The Deep Sea Drilling Project routinely processes by computer most of the quantitative data presented in the Initial Reports. Space limitations in the Initial Reports preclude the detailed presentation of all such data. However, copies of the computer readout are available for those who wish the data for further analysis or as an aid in selecting samples.

Magnetics, seismic reflection and bathymetric data collected underway by the *Glomar Challenger* will also be available for distribution twelve months after completion of the cruise.

Requests for these data may be made to:

Chief Scientific Editor
Deep Sea Drilling Project
Scripps Institution of Oceanography
University of California at San Diego
La Jolla, California 92037

A charge may be made to recover the expenses of responding to individual requests. Estimated charges can be furnished before the request is processed, if required.

9. This policy has the approval of the National Science Foundation and is designed to help ensure that the greatest possible scientific benefit is gained from the materials obtained, and that samples will be made widely available to interested geologists.

Subject Index to Previous Initial Report Volumes

The following subject index to articles published in the Initial Report series is provided to facilitate access to information generated by the Deep Sea Drilling Project.

The list is a compilation by broad subject of chapters published to date. Please note that the grouping is not all-inclusive (i.e. some detailed investigations are included in the Site Report sections of volumes and in some lithologic summary chapters and are not referred to specifically here by these chapter numbers). The four-number series used here designates volume, chapter, and page numbers; for example 1-14-382-384 designates Volume 1, Chapter 14, Pages 382-384. The letter A indicates that the chapter is in an appendix of a volume.

In general, the breakdown is as follows:

Physical Properties and Measurements	32 Chapters
Water Chemistry	21 Chapters
Geochemistry	17 Chapters
Paleontology and Biostratigraphy	65 Chapters
Biostratigraphy	6 Chapters
Foraminifera	18 Chapters
Nannofossils	27 Chapters
Radiolaria	9 Chapters
Others	5 Chapters
Lithology/Sedimentology	27 Chapters
Summaries	8 Chapters
Basalts and Volcanic Rocks	6 Chapters
Others (not including X-ray, carbon carbonate, and grain size)	13 Chapters
Leg Summaries	9 Chapters
Site Surveys	5 Chapters
Others	2 Chapters

Physical Properties and Measurements

- I. *General*
 - 4-11-267-295
 - 6-A-1319-1325
 - 7-23-1037-1081 Natural Gamma
 - 7-24-1081-1108 Density and Porosity
 - 7-25-1108-1161 Sound Velocity
 - 9-23-945-947
 - 11-24-667-723
 - 12-12-935-953
 - 14-18-655-677
- II. *Sonic Velocity in Sediments*
 - 5-27-545-551
- III. *Log Evaluation*
 - 1-8-321-325
 - 6-A-1325-1327
- IV. *14 Mev Neutron Activation Analysis*
 - 1-14-368-369
 - 2-12-347-349
 - 3-17-583-589
 - 4-16-371-375
 - 5-17-485-487
 - 6-36-1121-1123
- V. *Heat Flow*
 - 5-28-551-557
 - 8-18-837-851

VI. *Paleomagnetism*

- 1-23-501-521
- 2-17-375-387
- 3-22-667-699
- 4-22-439-455
- 5-22-523-525
- 6-28-961-965
- 7-27-1227-1235
- 8-19-851-853
- 14-25-777-785

VII. *Procedures and Operations*

- 4-A-743-753 Lab Procedures
- 6-21-691-709 Underway Operations

VIII. *Bathymetrics, Magnetism, and Seismic Reflection*

- 14-11-341-377

Water Content

I. *General*

- 1-10-334-340

II. *Interstitial Water Studies on Small Core Samples*

- 1-20-403-411
- 2-15-373-375
- 3-21-663-667
- 4-19-401-415
- 5-20-501-513
- 6-25-811-823
- 7-12-871-883
- 8-21-857-871
- 9-17-845-857
- 12-A-1193-1201
- 14-21-753-763

III. *Interstitial Water Chemistry*

- 1-21-411-415
- 2-16-373-375
- 4-20-415-431
- 5-21-513-523
- 6-26-823-829
- 7-13-883-889
- 8-20-853-857
- 9-16-841-845
- 14-22-763-767

Geochemistry

I. *Preliminary Geochemistry*

- 4-26-645-659
- 7-11-863-871

- II. *Geochemistry and Mineralogy*
 - 6-27-829-961
 - 7-16-965-977
 - 11-27-791-801
 - 14-20-727-753
- III. *Organic Geochemistry*
 - 6-A-1327-1329
 - 8-22-871-873
 - 9-18-857-859
 - 12-18-1115-1127
- IV. *Hydrocarbons and Fatty Acids*
 - 7-14-889-913
 - 8-23-873-901
 - 9-19-859-903
- V. *Others*
 - 9-20-903-909 Amino Acid Treatment of Sediments
 - 4-21-431-439 Tetrapyrrole Pigments
 - 6-37-1123-1131 Isotopic Analysis of Foraminifera
 - 1-22-415-501 Analysis of Oil and Cap Rock

Paleontology and Biostratigraphy

- I. *Biostratigraphy*
 - 1-25-594-624
 - 2-19-391-413
 - 5-29-557-569
 - 6-39-1253-1301
 - 7-36-1723-1749
 - 12-14-965-1003
- II. *Foraminifera*
 - A. *General*
 - 4-25-577-645
 - 14-13-389-421
 - B. *Foraminiferal From Selected Samples*
 - 1-17-392-398
 - 2-14-357-367
 - 3-20-629-663
 - 4-18-383-401
 - 6-31-1013-1027
 - 8-11-713-727
 - C. *Report on Larger Foraminifera*
 - 1-18-398-400
 - 11-15-545-547
 - 11-19-595-607
 - D. *Jurassic and Cretaceous Foraminifera*
 - 6-32-1027-1055
 - 11-17-551-561
 - 11-18-561-595
 - E. *Cenozoic Foraminifera*
 - 6-33-1055-1069
 - F. *Neogene Globigerina*
 - 7-28-1235-1471
 - G. *Planktonic Foraminifera Biostratigraphy*
 - 9-25-1059-1197
 - H. *Neogene Planktonic Foraminifera*
 - 11-14-483-545
- III. *Nannoplankton*
 - A. *Coccolith Age Determinations*
 - 1-15-369-388
 - 2-13-349-357

- 3-18-589-613
- 3-19-613-629
- 4-17-375-383
- 5-18-487-495
- 5-19-495-501
- 7-30-1509-1513
- 9-15-833-841
- 12-15-1003-1071
- B. *Coccolith Stratigraphy*
 - 6-29-965-1005
 - 7-31-1513-1529
 - 8-14-791-809
 - 9-14-817-833
 - 11-13-475-483
 - 12-16-1071-1085
 - 14-15-487-495
- C. *Calcareous Nannoplankton*
 - 4-23-455-503
 - 11-12-459-475
 - 14-14-421-487
- D. *Preliminary Dating by Fossil Nannoplankton*
 - 1-16-388-392
 - 6-30-1005-1013
 - 8-15-809-819
- E. *Tertiary Calcareous Nannoplankton*
 - 7-20-1471-1509
- F. *Dinoflagellate Stratigraphy*
 - 11-10-367-427
 - 14-17-649-655
- G. *Neogene Silicoflagellates*
 - 7-34-1695-1709
- IV. *Radiolaria*
 - A. *General*
 - 4-24-503-577
 - 6-34-1069-1119
 - 8-12-727-791
 - 9-24-947-1059
 - 12-17-1085-1115

ACKNOWLEDGMENTS

The Deep Sea Drilling Project Leg 13 scientific program was carefully planned by an international group prior to the cruise. We are indebted particularly to Dr. J. B. Hersey, who chaired, and provided the inspiration and leadership, to the JOIDES Mediterranean Advisory Panel. We are grateful to the JOIDES Planning Committee, then chaired by Dr. A. E. Maxwell, for its interest and guidance. We wish to express our appreciation for the effort of an informal group of the European Friends of JOIDES which included: Prof. L. Glangeaud, Paris; Drs. X. Le Pichon and G. Pautot, Brest; Drs. C. Bobier, G. Bellaiche and A. Mauffret, Villefranche/Mer; Dr. O. Leenhardt and Miss G. Alla, Monaco; Prof. C. Morelli, Trieste, Prof. R. Selli, Bologna, Prof. M. B. Cita, Milan; Prof. H. Closs, Hannover; Prof. C. Drooger, and Dr. B. Collette, Utrecht; Dr. D. McKenzie and Miss J. Lort, Cambridge; Profs. A. Gansser, R. Trümpy and H. Bolli, Zurich; Prof. H. Laubscher, Basel; Dr. A. Matter, Bern, as well as representatives from the petroleum industry (S.I.P.M., E.L.F., C.F.P., S.P.N.A.), among others. They all gave freely of their unpublished data and advice to help in the site selections.

Surveys by the R/V *Vema* and *Robert D. Conrad* of the Lamont-Doherty Geological Observatory of Columbia University under the scientific leadership of Maurice Ewing and by the R/V *Chain* and *Atlantis* of the Woods Hole Oceanographic Institution conducted by J. B. Hersey and E. F. K. Zarudzki provided the basic data for our original planning.

A pre-site survey of the western Mediterranean drill holes was executed in the spring of 1970 by the R/V *Jean Charcot* of the Centre Océanologique de Bretagne with Guy Pautot as chief scientist.

The scientific party aboard the *Glomar Challenger* expresses its appreciation to Captain Joseph Clarke, his officers and crew for their ever ready cooperation and excellent seamanship. We wish to thank Roy Anderson, our operations manager on loan to Scripps from Esso Exploration, Inc., for his consultations and technical expertise. The drilling crew worked diligently and cheerfully and provided a great morale boost to everybody on board. The efforts of the marine technicians and yeomen under the supervision of Ted Gustafson are appreciated.

The scientific merit of the "Initial Reports" has been enhanced by the contributions of numerous colleagues and their associates who authored the many papers in Parts II, III and IV of this volume. We appreciate the enthusiastic responses to our invitations to participate in the examinations of the core samples.

We are grateful to the numerous people at Lamont-Doherty Geological Observatory who have helped in this project and in particular, to R. John Fiske, for the many curatorial services rendered, to Edward Haff for the digital processing of geophysical data, to B. C. Schreiber for her generous help in the analysis of smear slides and photomicrography, and to Hester Cason for her technical editing. U. Krauss of E. T. H., Zurich performed extracurricular secretarial services.

Encouragement and support of the Deep Sea Drilling Project has been essential. We thank Terry Edgar, chief scientist of the project, for his friendship, counseling and kind hospitality. Bob Gilkey contributed extra effort in logistic maneuvering in order

ACKNOWLEDGMENTS

to locate one of our missing scientists. Peter Supko, Ansis Kaneps, and their associates have had the thankless task of editing and assembling this volume.

Our home institutions and families deserve special mention for generously allowing freedom from normal duties and routines in order to continue in our analyses of the information gathered on the cruise, leading to the completion of these Initial Reports.

All of us share many fond memories of a fruitful cooperation.

CONTENTS

	Page
PART II: SUPPLEMENTARY INVESTIGATIONS	515
SECTION A—GEOPHYSICAL RESULTS	
Chapter	
15 UNDERWAY GEOPHYSICAL MEASUREMENTS OBTAINED ON THE GLOMAR CHALLENGER IN THE EASTERN NORTH ATLANTIC AND MEDITERRANEAN SEA	517
W. B. F. Ryan, T. B. Gustafson	
16 GEOPHYSICAL SURVEYS AT SITES 120, 121, AND 132 OF THE DEEP SEA DRILLING PROJECT	581
E. Christofferson, M. R. Fisk	
17 CORRELATION OF A TRANS-TYRRHENIAN REFLECTION PROFILE WITH SITE 132	587
E. F. K. Zarudzki, C. Morelli, I. Finetti, H. K. Wong	
18 COMPRESSIONAL WAVE VELOCITIES IN SELECTED SAMPLES OF GABBRO, SCHIST, LIMESTONE, ANHYDRITE, GYPSUM AND HALITE	595
E. Schreiber, P. J. Fox, J. J. Peterson	
19 PRELIMINARY PALEOMAGNETIC MEASUREMENTS ON SEDIMENTS FROM THE IONIAN (SITE 125) AND TYRRHENIAN (SITE 132) BASINS OF THE MEDITERRANEAN SEA	599
W. B. F. Ryan, J. D. Flood	
SECTION B—SEDIMENTARY PETROLOGY	
20 X-RAY MINERALOGY	605
20.1 X-RAY MINERALOGY STUDIES OF SELECTED SAMPLES FROM THE SEA FLOOR OF THE NORTHEAST ATLANTIC AND MEDITERRANEAN SEA	606
I. Zemmels, H. E. Cook	
20.2 DISTRIBUTION OF THE FINE-GRAINED SEDIMENT COMPONENT IN THE MEDITERRANEAN	666
W. D. Nesteroff	
20.3 A PRELIMINARY INVESTIGATION OF THE CLAY MINERALS IN THE WESTERN ALBORAN BASIN, SITE 121	670
G. Dunoyer de Segonzac, M. Hoffert	
21 MINERALOGY, PETROGRAPHY, DISTRIBUTION, AND ORIGIN OF THE MESSINIAN MEDITERRANEAN EVAPORITES	673
W. D. Nesteroff	

22	THIN-SECTION PETROGRAPHY OF THE MEDITERRANEAN EVAPORITES	695
22.1	PETROGRAPHIC DATA AND COMMENTS ON THE DEPOSITIONAL ENVIRONMENT OF THE MIOCENE SULFATES AND DOLOMITES AT SITES 124, 132 AND 134, WESTERN MEDITERRANEAN SEA	695
	G. M. Friedman	
22.2	PETROGRAPHY OF A HALITE SAMPLE FROM HOLE 134— BALEARIC ABYSSAL PLAIN	708
	K. J. Hsü, W. B. F. Ryan, B. C. Schreiber	
23	PETROGRAPHY AND MINERALOGY OF SAPROPELS	713
	W. D. Nestoroff	
24	STUDIES OF DIAGENESIS AND LITHIFICATION	721
24.1	DIAGENESIS IN MEDITERRANEAN SEA CORE SAMPLES FROM SITE 124—BALEARIC RISE AND SITE 125A—IONIAN BASIN	721
	M. Kastner, R. Siever	
24.2	EXAMINATION OF SELECTED LITHIFIED ROCKS FROM SITES 121—ALBORAN BASIN, 125—IONIAN BASIN, 129— STRABO TRENCH AND MOUNTAINS, AND 131— NILE CONE ..	726
	J. L. Gevirtz	
25	MINERALOGY OF CLASSIC SEDIMENTS	729
25.1	TEXTURE AND MINERALOGY OF SOME CLASTIC SEDIMENTS FROM SITE 133—WESTERN SARDINIA SLOPE	729
	K. Kelts	
25.2	MINERALOGICAL COMPOSITION OF THE NILE CONE, MEDITERRANEAN RIDGE, AND STRABO TRENCH SANDSTONES AND CLAYS	731
	W. B. F. Ryan, K. Venkatarathnam, F. C. Wezel	
 SECTION C—PETROLOGY AND GEOCHEMISTRY OF THE BASEMENT ROCKS		
26	“BASEMENT” ROCKS OF GORRINGE BANK	747
26.1	PETROGRAPHY OF THE GORRINGE BANK “BASEMENT”	747
	J. Honnorez, P. J. Fox	
26.2	PETROGRAPHY OF ROCKS FROM THE CRESTAL AREA OF THE GORRINGE BANK	749
	A. T. Gavasci, P. J. Fox, W. B. F. Ryan	
27	“BASEMENT” ROCKS OF THE WESTERN ALBORAN BASIN	753
27.1	PETROGRAPHY OF THE WESTERN ALBORAN BASIN “BASEMENT”	753
	K. J. Hsü, P. J. Fox, W. B. F. Ryan	

27.2	PETROGRAPHICAL STUDY OF "ACOUSTIC BASEMENT" AND ASSOCIATED BRECCIA AT SITE 121—WESTERN ALBORAN BASIN: A COMPARISON WITH THE BETICO-RIFEAN BASEMENT J. Kornprobst	759
27.3	ISOTOPIC DATING OF ALBORAN "BASEMENT" R. H. Steiger, U. Frick	762
27.4	TRACE-ELEMENT COMPOSITION OF ALBORAN BASIN "BASEMENT" J. R. Cann	762
27.5	COMMENTS ON ALBORAN BASIN "BASEMENT" SAMPLES K. J. Hsü, W. B. F. Ryan	762
28	PETROLOGY AND GEOCHEMISTRY OF THE VALENCIA TROUGH VOLCANIC ROCKS	767
28.1	PETROGRAPHY OF THE VALENCIA TROUGH VOLCANIC ROCKS K. J. Hsü, J. Honnorez	767
28.2	CHEMISTRY OF THE VALENCIA TROUGH VOLCANIC ROCKS M. Weibel, K. J. Hsü	770
28.3	TRACE ELEMENTS IN THE VALENCIA TROUGH VOLCANIC ROCKS J. R. Cann, K. J. Hsü	772
28.4	RADIOMETRIC DATING OF THE VALENCIA VOLCANIC ROCKS G. Ferrara, G. Bigazzi, F. P. Bonadonna, O. Giuliani	773
29	THE SARDINIA SLOPE BASEMENT	775
29.1	COMPARATIVE PETROGRAPHY OF THREE SITES OF BASEMENT ROCKS FROM THE WESTERN MEDITERRANEAN K. J. Hsü, W. B. F. Ryan, T. Cocozza, P. Magnier	775
29.2	ISOTOPIC DATING, SARDINIA SLOPE BASEMENT U. Frick, R. H. Steiger, K. J. Hsü	780

SECTION D—GEOCHEMISTRY OF EVAPORATES, FAUNAS, AND INTERSTITIAL FLUIDS

30	STABLE ISOTOPE INVESTIGATIONS OF THE MIOCENE EVAPORITES AND PLIOCENE AND PLEISTOCENE SEDIMENTARY ROCKS AND OOZES	783
30.1	PRELIMINARY ISOTOPIC INVESTIGATIONS OF SAMPLES FROM DEEP-SEA DRILLING IN THE MEDITERRANEAN SEA R. M. Lloyd, K. J. Hsü	783

30.2	OXYGEN, CARBON, SULFUR, AND HYDROGEN STABLE ISOTOPES IN CARBONATE AND SULFATE MINERAL PHASES OF NEOGENE EVAPORITES, SEDIMENTS, AND IN INTERSTITIAL WATERS	788
	J-Ch. Fontes, R. Letolle, W. D. Nesteroff, W. B. F. Ryan	
30.3	STABLE OXYGEN AND CARBON ISOTOPE VARIATIONS IN BULK CARBONATES FROM LATE MIOCENE TO PRESENT, IN TYRRHENIAN BASIN—SITE 132	796
	J. R. Lawrence	
30.4	OXYGEN ISOTOPIC COMPOSITION OF BENTHONIC AND PLANKTONIC FORAMINIFERA OF EARLIEST PLIOCENE AGE AT SITE 132—TYRRHENIAN BASIN	798
	J. van Donk, T. Saito, N. J. Shackleton	
31	INTERSTITIAL WATER STUDIES	801
31.1	INTERSTITIAL WATER STUDIES ON SMALL CORE SAMPLES ...	801
	F. L. Sayles, F. T. Manheim, L. S. Waterman	
31.2	INTERSTITIAL WATER CHEMISTRY: DEEP SEA DRILLING PROJECT, LEG 13	809
	B. J. Presley, C. Petrowski, I. R. Kaplan	
32	GEOCHEMICAL SIGNIFICANCE OF GAS AND GASOLINE-RANGE HYDROCARBONS AND OTHER ORGANIC MATTER IN A MIOCENE SAMPLE FROM SITE 134—BALEARIC ABYSSAL PLAIN	813
	R. D. McIver	

SECTION E—MICROPALEONTOLOGY

33	CALCAREOUS NANNOFOSSILS	817
33.1	COCCOLITH STRATIGRAPHY LEG 13, DEEP SEA DRILLING PROJECT	817
	D. Bukry	
33.2	CALCAREOUS NANNOFOSSIL AGE DETERMINATIONS, DEEP SEA DRILLING PROJECT, LEG 13	822
	S. Gartner, Jr.	
34	SILICEOUS MICROFOSSILS	829
34.1	CRETACEOUS AND QUATERNARY RADIOLARIA IN DEEP SEA SEDIMENTS FROM THE NORTHEAST ATLANTIC OCEAN AND MEDITERRANEAN SEA	829
	P. Dumitrica	
34.2	MIOCENE AND QUATERNARY SILICOFLAGELLATES IN SEDIMENTS FROM THE MEDITERRANEAN SEA	902
	P. Dumitrica	

34.3	MIOCENE AND QUATERNARY EBRIDIANS IN SEDIMENTS FROM THE MEDITERRANEAN SEA, DSDP LEG 13	934
	P. Dumitrica	
34.4	PHYTOLITHARIA	940
	P. Dumitrica	
34.5	THE MEDITERRANEAN DIATOMS	944
	M. Hajos	
35	POLLEN ANALYSIS OF SOME SAPROPEL LAYERS FROM THE DEEP-SEA FLOOR OF THE EASTERN MEDITERRANEAN	971
	M. Rossignol-Strick	
36	PTEROPODS AND OSTRACODS	903
36.1	PRELIMINARY PTEROPOD RESULTS FROM THE MEDITERRANEAN SEA	903
	Y. Herman	
36.2	PSYCHROSPHERIC AND CONTINENTAL OSTRACODA FROM ANCIENT SEDIMENTS IN THE FLOOR OF THE MEDITERRANEAN	1002
	R. H. Benson	
PART III: SUMMARY AND CATALOGUE OF RESULTS		1009
37	SUMMARY OF THE EVIDENCE FOR EXTENSIONAL AND COMPRESSIONAL TECTONICS IN THE MEDITERRANEAN	1011
	K. J. Hsü, W. B. F. Ryan	
38	SUMMARY OF LITHOSTRATIGRAPHIC FINDINGS AND PROBLEMS	1021
	W. D. Nesteroff, F. C. Wezel, G. Pautot	
39	EVALUATION OF PHYSICAL PROPERTIES MEASUREMENTS ...	1041
	J. M. Lort	
40	INVENTORY OF BIOSTRATIGRAPHICAL FINDINGS AND PROBLEMS	1045
	M. B. Cita	
41	CRETACEOUS FORAMINIFERAL SEDIMENTS AND LIMESTONES	1075
41.1	LOWER CRETACEOUS FORAMINIFERAL FAUNA FROM GORRINGE BANK, EASTERN NORTH ATLANTIC	1075
	W. Maync	
41.2	LOWER CRETACEOUS LIMESTONES FROM THE HELLENIC TROUGH, IONIAN BASIN (SITE 127)	1112
	W. Maync	

42	CATALOGUE OF CALCAREOUS NANNOPLANKTON FROM SEDIMENTS OF NEOGENE AGE IN THE EASTERN NORTH ATLANTIC AND MEDITERRANEAN SEA	1137
	H. Stradner	
PART IV: REGIONAL SYNTHESSES		1201
43	THE ORIGIN OF THE MEDITERRANEAN EVAPORITE	1203
	K. J. Hsü, M. B. Cita	
44	REGIONAL DISTRIBUTION AND STRATIGRAPHY OF LATE MIOCENE EVAPORITES AND EVIDENCE OF MAJOR DEPRESSIONS IN THE MEDITERRANEAN SEA LEVEL	1233
44.1	LATE MIOCENE EVAPORITES OF THE CENTRAL SICILIAN BASIN, ITALY	1234
	A. Decima, F. C. Wezel	
44.2	GEOLOGICAL HISTORY OF THE MEDITERRANEAN AT THE END OF THE MIOCENE—THE BEGINNING OF THE PLIOCENE ACCORDING TO NEW DATA	1241
	I. S. Chumakov	
44.3	PLIOCENE AND PLEISTOCENE DEPOSITS OF THE NILE VALLEY IN NUBIA AND UPPER EGYPT	1242
	Abstracted from Chumakov	
44.4	LATE TERTIARY CHANNEL SYSTEM IN NORTHERN LIBYA AND ITS IMPLICATIONS ON MEDITERRANEAN SEA LEVEL CHANGES	1244
	F. T. Barr, B. R. Walker	
44.5	THE EUSTATIC HYPOTHESIS AND THE PRE-PLIOCENE CUTTING OF THE RHONE VALLEY	1251
	G. Clauson	
45	THE SEDIMENTARY HISTORY OF THE MEDITERRANEAN AREA DURING THE NEOGENE	1257
	W. D. Nesteroff	
46	QUATERNARY RECORD IN THE IONIAN AND TYRRHENIAN BASINS OF THE MEDITERRANEAN SEA	1263
	M. B. Cita, M. A. Chierici, G. Ciampo, M. Moncharmont Zei, S. d'Onofrio, W. B. F. Ryan, R. Scorziello	
47	THE PLIOCENE RECORD IN DEEP-SEA MEDITERRANEAN SEDIMENTS	1341
47.1	PLIOCENE BIOSTRATIGRAPHY AND CHRONOSTRATIGRAPHY	1343
	M. B. Cita	
47.2	PALEOMAGNETIC STRATIGRAPHY	1380
	W. B. F. Ryan	

47.3	PALEONTOLOGICAL EVIDENCE OF CHANGES IN THE PLIOCENE CLIMATES	1387
	N. Ciaranfi, M. B. Cita	
47.4	ISOTOPIC EVIDENCE OF CHANGES IN OCEANIC CIRCULATION	1400
	A. Longinelli, M. B. Cita	
47.5	TIMESCALE AND GENERAL SYNTHESIS	1405
	M. B. Cita, W. B. F. Ryan	
48	STRUCTURAL FRAMEWORK OF SELECTED REGIONS OF THE WESTERN MEDITERRANEAN	1417
48.1	ALBORAN SEA	1417
	J-L. Olivet, G. Pautot, J-M. Auzende	
48.2	VALENCIA BASIN	1430
	G. Pautot, J-M. Auzende, J-L Olivet	
48.3	BALEARIC ISLANDS: SOUTHERN PROLONGATION	1441
	J-M. Auzende, J-L. Olivet, G. Pautot
